

# The Cambridge Topper

## Fitting the Topper to your Z88

The Cambridge Topper is designed to form a snug grip-fit on your Z88. A few moments practice of the correct sequence for putting it on will be repaid by long trouble-free service!

- 1 Gripping the Topper between the thumbs and forefingers of both hands, splay its sides very slightly and press it down over the leading edge of the keyboard while tilting it up slightly to the rear.
- 2 Now draw the cover smoothly back and down, until its inside front edge is firmly against the front edge of the keyboard.
- 3 Finally, press down evenly on the rear corners over the display edge and the Topper will clip firmly into place.

This procedure (which takes about three seconds!) ensures a good seal around the whole Z88 to help keep keyboard and screen clean.

When removing the Topper, start by lifting its rear edge away from the display and it will slip off easily.
